T-Rail Linear Guide System

Much too often, expensive high-precision linear motion profiles and bearing are used in applications where extreme accuracy is not mandatory.

Sometimes LESS is **MORE**...

Stop paying for unused accuracy! With Faztek's new T-Rail Linear Guide System, you can obtain the benefits of a smooth action bearing without the high costs.

With a completely new approach to linear motion, Faztek has successfully integrated a "T-Rail" into a 1.5" x 1.5" T-Slotted aluminum extrusion. The result? An efficient linear motion system built right into the frame of your project while allowing use of the other three t-slots.

What's the latest and greatest from Faztek? Take a look at our new Double Linear Guide Bearing. Compatible with the 15LG1515L t-rail profile, this bearing is also outfitted with a single UHMW side pad for increased support. Better yet, you can tighten and lock down the bearing with the adjustable "L" handle (included).

T-Rail Advantages

- Cost-effective
- Maintenance free
- Corrosion resistant
- Light weight
- Various sizes and styles of bearings

For use with the same t-rail profile, Faztek's original bearings are available in various sizes and mounting configurations.

15LM8574 - 1.5"
15LM8570 - 3.0"
15LM8572 - 6.0"
